DUNGS®
Combustion Controls

Technical description

The DUNGS Flow Control Drive actuators are programmable, electronic actuators with 2-point-/3-point step as well as analogue control. The three design sizes cover a torque range up to 35 Nm. Due to the robust die-cast housing with optical position indicator in the cover, the actuators achieve a high protection category. Together with the integrated heating, the actuators are also suitable for extreme ambient conditions.

Application

The Flow Control Drive actuators are used to control motor-driven control and throttle valves.

In combination with the FCV... flow control valves and FCVL flow control valves linear, the FCD actuators provide an ideal combination. Flow rates of air or gas can therefore be precisely controlled.

Product description

The DUNGS Flow Control Drive actuators FCD A xx-xx xx are suitable for precise control and adjustment of motor-driven control and throttle valves. In conjunction with an air or gas control valve (FCV G/FCV A) or a comparable actuator, flow rates can be precisely controlled:

- Three design sizes cover torques from 3 Nm to 35 Nm.
- The integrated step motor in combination with the micro-controller control enables a high-precision control.
- Device properties and parameters are set directly on the device.
- Two-point operating mode (open/ close) and two-point operating mode with additional intermediate position
- Switchable between 3-point step and analogue control during operation
- Analogue position feedback
- Optical position indicator in the housing cover and electronic position feedback (0/4 - 20 mA or 0/2 - 10 V).
- End positions freely programmable for min. and max. position. End positions are signalled via potential-free relay SPDT contacts.
- Potential-free relay SPDT contact for evaluation of operational readiness.
- Depending on the design size, two (only FCD A 00-10 xx) or three additional position cam switches are available.
- The contacts are wired to the connecting terminals potential-free.
- The actuators have additional, diverse setting options and features.
- Simple parametrisation / setting by rotary switch / button directly on the device: rotation time, direction of rotation, ramp times and hysteresis.
- Robust aluminium housing, protection class IP 65 and integrated heating ensure smooth and continuous operation even under difficult conditions.

Torque configuration

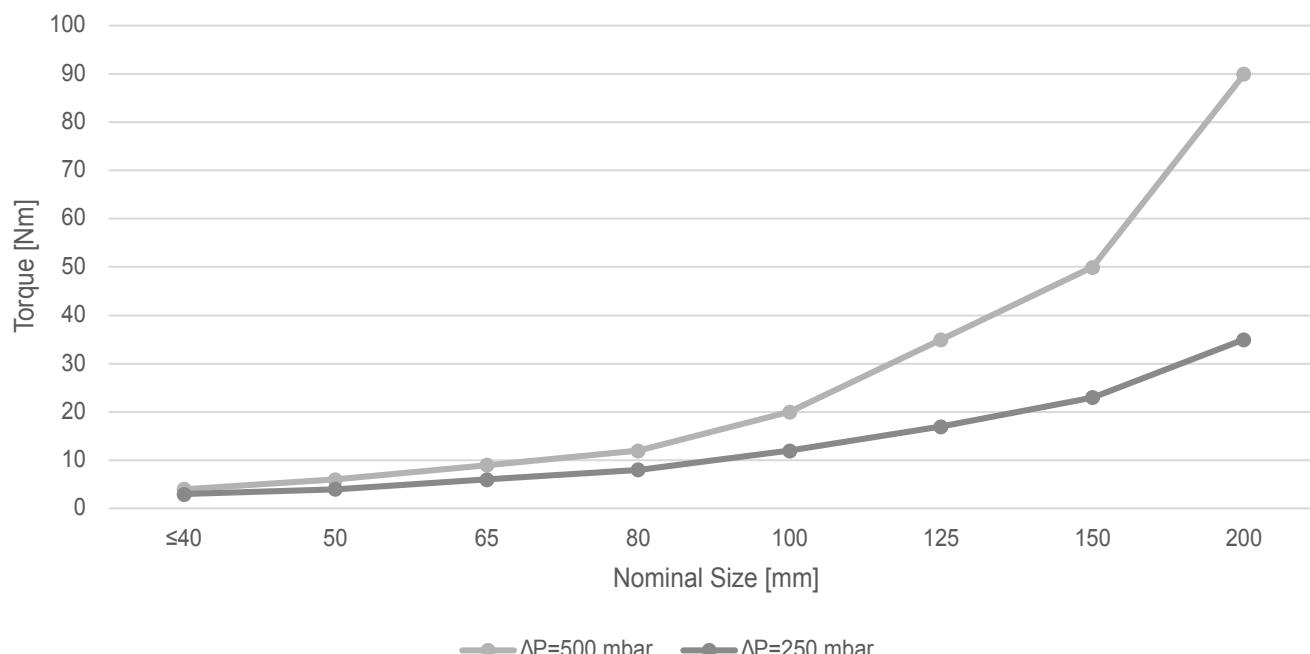

Operation with FCV A/G flow control valves

For flow control valves in flanged version (DUNGS DMK and FCV A/G), the FCD actuator with size A 00 15 can be used for a nominal size up to and including NW 80. For a nominal width wider than NW 80 up to and including NW 200, the FCD actuator with size A 01-15 is suitable. These specifications apply for a differential pressure of 500 mbar.

For lower differential pressures, it is possible to deviate from the above specifications. The graph below contains information on the torques required by the FCV flow control valves at different differential pressures. The nominal size specified in the graph always corresponds to the nominal flow size of the flow control valves.

The FCD 00-10 actuator is usually used to operate the FCVL linear actuators. This can be mounted directly without any further effort.

FCV A/V - Torque demand

Accessories

Operation with DMK Control Valves

The DUNGS Flow Control Drive actuators of the FCD A xx xx x series are of course also suitable for controlling the DUNGS DMK control valves and other flow control valves.

To adapt the FCD actuators to the DMK control valves, the standard flange plate must be replaced. Special shaft flanges are also required to adapt the drive shaft.

The FCD A 00-10 xx actuator is suitable for operating DMK control valves with an Rp thread up to a nominal width of 2".

Installation instructions

The FCD A 00-10 actuator is suitable for operating Rp threaded valves (DMK control valves) up to a nominal diameter of 2". For control valves in flanged version, the actuator FCD A 00-15 xx can be used up to a nominal flow diameter of ≤ 80 mm. The FCD A 01-15 xx actuator is suitable for a nominal flow diameter ≥ 100 mm up to and including a nominal flow diameter of 200 mm.

This assignment is based on a maximum differential pressure $[\Delta p_{max}]$ of 500 mbar.

Accessories

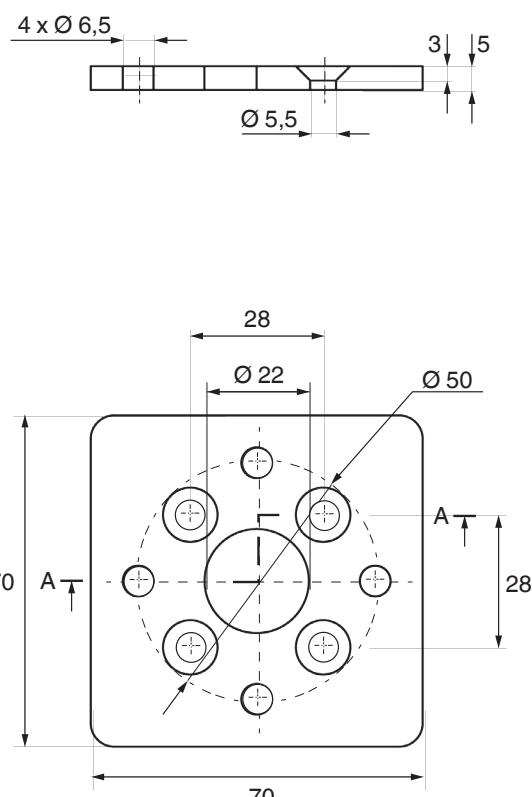

The DUNGS Flow Control Drive actuators of the FCD A xx-xx xx series are naturally also suitable for controlling the DUNGS DMK motor-driven valves and other control valves. To adapt the FCD actuators to the DMK motor-driven valves, the flange plate installed as standard must be replaced. Special shaft flanges are also required to adapt the drive shaft.

Flange plates for mounting on DMK motor-driven valves

In the following, it is apparent which flange plate is required to adapt an FCD actuator to a corresponding DMK control valve.
